

Associate Architect

12.1 Years Experience

ABOUT ME

High-energy and results-driven technologist with **12+ years of experience in .NET technologies and web application development**. Proven expertise in **solution architecture, project management, and full software development lifecycle (SDLC)** using both **Agile and Waterfall methodologies**. Adept at designing scalable enterprise solutions, driving end-to-end project delivery, and collaborating across teams to meet business objectives. Demonstrated ability to **lead and mentor teams**, ensuring quality, efficiency, and innovation in every phase of development.

CURRENT COMPANY

July 2019 - Present

Valueadd Softtech

Responsibilities

- Lead and mentor the development team in designing, building, and deploying scalable and efficient web solutions using DotNetCore, Dotnet MVC, Nest.js and React.js
- Drive technical architecture decisions, ensure adherence to best practices, and maintain high standards of code quality and performance.
- Oversee code reviews, debugging, and optimization to deliver robust and maintainable applications.
- Collaborate with cross-functional teams to align technical solutions with business goals and project timelines.
- Stay updated with emerging technologies and guide the team in adopting innovative approaches that enhance both organizational efficiency and technical excellence.

SKILLS

- | | | | |
|----------------|---------------|-------------------|---------------|
| • Dot Net Core | • ASP.NET MVC | • ASP.NET Web API | • Reactjs |
| • Nestjs | • MSSQL | • Python | • TailwindCSS |
| • MYSql | • Postgresql | • Docker | • SAP HANA |
| • Typescript | | | |

TOOLS

- | | | | |

| • Visual Studio | • VS Code | • Cursor AI | • Chagpt |
| • Figma | • Jira | • Github | • Augment Code |
| • Plastic SCM | • TFS | • Stripe Payments | • Plotly Charts |
| • SSMS | • SSRS | | |

PROJECTS WORKED ON

1. IWT - Analytics Portal

Duration of Project: 1 Year

Technology Used: Reactjs, Nestjs, Python, DotnetCore

Tools used: VSCode, Visual Studio, SSMS, Docker, Github, IIS

Team Size: 5-6

Project Description :

IWT - Analytics Portal is a mining-focused application designed to monitor and manage mine operations in real-time. It provides live dashboards and reports across modules like Location, Production and Atmosphere. The Location module tracks miner positions, check-ins, section timings, and underground/above-ground movement. The Atmosphere module monitors gas levels (CO, H2, N2), absolute pressure, and triggers alarms for unsafe conditions, while also providing hourly and daily min/max/average statistics.

Role in the Project :

Provided technical leadership and architectural direction across the full project lifecycle, from database design to system implementation. Designed and established the core application architecture ensuring scalability, performance, and maintainability. Led and mentored a cross-functional development team, driving adherence to best practices, coding standards, and delivery timelines. Oversaw code reviews and guided team members in resolving complex technical challenges. Acted as the primary technical liaison with clients, leading discussions to gather requirements, define solutions, and translate them into detailed technical documentation. Played a key role in strategic planning, technical decision-making, and quality assurance throughout the project.

2. IWT - Predictive Compliance

Duration of Project: 2 Year

Technology Used: Reactjs, DotnetCore

Tools used: VSCode, Visual Studio, SSMS, Github, IIS

Team Size: 2

Project Description :

IWT - Predictive Compliance, a web-based citation management and penalty analysis platform integrated with the U.S. Mine Safety and Health Administration (MSHA) database. The solution enables mine owners and operators to proactively evaluate and manage potential compliance issues using a proprietary analytics and penalty calculation engine. It provides instant penalty estimation, dispute impact analysis, and insights into the financial implications of new or contested citations. The platform centralizes citation data, supports custom reporting, and empowers users with data-driven compliance and operational decision-making.

Role in the Project :

Initially joined the project as an individual contributor, responsible for acquiring knowledge transfer (KT) from the previous development team and ensuring a smooth transition of ownership. Handled ongoing production issues, performed root cause analysis, and implemented effective fixes to stabilize the application. Gradually took on a lead role, overseeing maintenance activities, task prioritization, and coordination with stakeholders. Provided technical guidance to an additional developer, ensuring timely resolution of issues and consistent code quality. Actively contributed to process improvement, documentation, and continuous enhancement of system performance and reliability.

3. Vision33 - SALTBOX**Duration of Project:** 3.5 Year**Technology Used:** C# , Javascript, XML, SAP HANA**Tools used:** Visual Studio, SSMS , Hana Studio**Team Size:** 4 to 5**Project Description :**

The Saltbox Platform is a cloud-native Integration Platform as a Service (iPaaS) developed to enable seamless enterprise integration, workflow automation, and collaboration between diverse business applications. Designed for cloud-first architecture, it facilitates the secure and efficient exchange of transactional data across critical business systems. The platform also supports intelligent human intervention, allowing users to manage inputs, approvals, and exception handling with enhanced flexibility and control.

Role in the Project :

Worked as an individual contributor responsible for designing and implementing business workflows and integrations within the Saltbox Platform as per client requirements. Developed and configured integrations across multiple enterprise systems, including SAP, Sage Intacct, Salesforce, Shopify, and WooCommerce. Collaborated with clients to understand integration needs, translate them into technical solutions, and ensure seamless data flow between systems. Authored detailed technical documentation for implemented workflows and managed multiple client integration projects simultaneously, ensuring timely delivery and quality outcomes

4. Homeworks**Duration of Project:** 5 Month**Technology Used:** Nest Js, React Js, PostgreSQL**Tools used:** Vs Code**Team Size:** 4 to 5**Project Description :**

The HomeWorks Web App (HomeCare) is an intuitive platform designed for homeowners, agents, service providers and administrators to manage home services seamlessly. It streamlines bookings, service records, and communications, facilitating smooth interaction between parties. Built with dashboards to monitor companies, market centres, service providers, and revenue by service, the system provides administrators with deep operational visibility. The app supports categorised services, market-centre mapping, company registration and status tracking across zones, cities and states.

Role in the Project :

Provided technical leadership and architectural direction across the full project lifecycle, from database design to system implementation. Designed and established the core application architecture ensuring scalability, performance, and maintainability. Led and mentored a cross-functional development team, driving adherence to best practices, coding standards, and delivery timelines. Oversaw code reviews and guided team members in resolving complex technical challenges. Acted as the primary technical liaison with clients, leading discussions to gather requirements, define solutions, and translate them into detailed technical documentation. Played a key role in strategic planning, technical decision-making, and quality assurance throughout the project.

OTHER PROJECTS

Worked on multiple cloud-based enterprise platforms focused on compliance management, laboratory operations, and risk assessment across global industries. Contributed to the development of the Health Check Platform, enabling regulated businesses to assess the design and effectiveness of compliance programs through control testing, policy mapping, and data-driven insights. Developed and enhanced iLIMS, an integrated Laboratory Information Management System addressing all key functional areas of laboratory operations. Also worked on AML/CFT compliance solutions, including AML Accelerate, a global risk assessment platform supporting organizations across 75+ countries in meeting Anti-Money Laundering (AML) and Counter-Terrorism Financing (CTF) regulatory obligations.

WORK HISTORY

Valueadd Softtech & Systems Pvt. Ltd. 6.3 Years | July 2019 - Present | Associate Architect

Shujabits Infotech Solutions PVT LTD 4.9 Years | Aug 2014 - May 2019 | Team Lead

MargyTech Pvt. Ltd 1.1 Year | July 2013 - Aug 2014 | Software Developer
