

Software Engineer

3.8 Years Experience

ABOUT ME

Software Engineer experienced in the MERN stack and Python, committed to delivering scalable and efficient solutions. I take pride in writing clean, maintainable code and optimizing application performance. Passionate about problem-solving, continuous learning, and building products that make a real impact.

CURRENT COMPANY

March 2023 - Present

Valueadd Softech

Responsibilities

- Develop, test and maintain scalable web applications using modern technologies.
- Write clean, reusable, and efficient code following best practices and modern design patterns.
- Participate in software design discussions, code reviews, and Agile sprint planning.
- Integrate third-party services, APIs, and tools to enhance functionality.
- Continuously learn and adopt new technologies to improve development efficiency and code quality.

SKILLS

- | | | | |
|-----------|---------------|--------------|----------------|
| • HTML | • CSS | • Javascript | • Typescript |
| • NodeJS | • React | • Express JS | • Nest JS |
| • Next JS | • MongoDB | • Vue JS | • Tailwind CSS |
| • JAVA | • Spring Boot | • PySpark | • Python |

TOOLS

- | | | | |
|-----------|------------|-------------|--------------|
| • Postman | • Jira | • Github | • Swagger |
| • Copilet | • Chat GPT | • Cursor AI | • Perplexity |
| • n8n | | | |

PROJECTS WORKED ON

1. VAST ClientCare

Duration of Project: 6 Months
Technology Used: React , Express JS
Tools used: VS Code,Jira,Chat gpt,
Team Size: 5-6

Project Description:

The VAST Client Care application is a comprehensive web and mobile platform developed for a real estate group to streamline the entire customer lifecycle — from pre-possession to post-possession. It enables effective management of bookings, payments, clearances, and maintenance requests through dedicated modules for CRM, possession, and resident support, improving operational efficiency and customer satisfaction.

Role in the Project :

Built a comprehensive web application to manage the property handover lifecycle, covering pre-possession, possession, and post-possession stages for a real estate group. Developed dynamic dashboards, responsive UI components, and document management features using React.js,Express JS, Tailwind CSS, and MongoDB. Implemented backend APIs with Express JS and integrated role-based workflows for finance, registration, quality clearance.Converted the frontend from Angular to React for admin module. Optimized database queries and API performance, designed and managed MongoDB schemas, and created reusable form components with React Hook Form and Zod. Collaborated with cross-functional teams on DFDs, ERDs, API documentation, and QA processes, maintaining clean, modular code and delivering a seamless, efficient experience for builders, flat owners, and society managers.

2. Agent Transaction Control

Duration of Project: 6 Months
Technology Used: Vue JS
Tools used: VS Code,Chat gpt, Cursor AI
Team Size: 5-6

Project Description:

Agent Transaction Control is a web application designed to manage property transactions efficiently. It facilitates transaction registration by agents, enables sellers to submit required forms (VLQ, TDS, SPQ, CSP, etc.), and provides confirmation workflows. Transaction Controllers (TC) can oversee all transactions from their group of agents, ensuring smooth tracking and management. The project also integrates third-party services like DocuSign for digital signatures.

Role in the Project :

Worked as a Frontend Developer using Vue.js for building UI components and integrating workflows. Collaborated with the backend team, which provided APIs via FeathersJS from the Aspenify project, to display and manage transaction data. Implemented forms for agents and sellers, including dynamic validation and submission workflows.

Integrated DocuSign API for electronic document signing. Ensured the UI delivered a seamless user experience for different roles including Transaction Controllers, Agents, and Sellers. Collaborated with cross-functional teams to understand requirements, optimize UI performance, and maintain clean, reusable code..

3. IWT

Duration of Project: 6 Months

Technology Used: ReactJs, Nestjs, SQL, Python, PySpark

Tools used: Vscode

Team Size: 5-6

Project Description :

IWT is a mining-focused application designed to monitor and manage mine operations in real-time. It provides live dashboards and reports across modules like Location and Atmosphere. The Location module tracks miner positions, check-ins, section timings, and underground/above-ground movement. The Atmosphere module monitors gas levels (CO, H₂, N₂), absolute pressure, and triggers alarms for unsafe conditions, while also providing hourly and daily min/max/average statistics.

Role in the Project:

Worked on the engine side handling pre-processing and post-processing of real-time sensor data. Integrated Kafka streams to ingest continuous data from miner and atmospheric sensors. Processed raw data using PySpark and stored the processed results in SQL databases. Implemented logic to calculate miner timings, section durations, and performance metrics. Developed logic to calculate different timing for location module. For atmosphere module worked on sensor raw data messages. Optimized data pipelines for performance, accuracy, and scalability. Collaborated with cross-functional teams to ensure proper data flow between Kafka, Delta tables, PySpark processing, and SQL storage.

OTHER PROJECTS

Worked on 2 more projects across finance and education domain. I worked on WSB project in which we can handle different funds related to real estate. I worked on acquisition module. Also I have worked on online job portal for institute .

WORK HISTORY

Valueadd Softtech	3.1 Years March 2023 - Current Software Engineer
CATALYST IT	8 Month July 2022 - Feb 2023 Java Developer

CERTIFICATES

Javascript Basics	Sept 2025(HackerRank)
Javascript Intermediate	Feb 2026(HackerRank)
Python Basic	Feb 2026(HackerRank)
Python Programming	Feb 2026(Pravi)
Fundamentals of LLM	March 2026(Hugging Face Instructor)
Programming with Python 3.X	Mar 2026(Simplilearn)
Python Libraries for Data Science	Mar 2026(Simplilearn)
