

Sr. Quality Analyst

9 Years Experience

ABOUT ME

Accomplished Senior Quality Analyst with proven expertise in manual and automation testing, dedicated to delivering high-quality and reliable software solutions. Highly detail-oriented and process-driven, with a strong focus on maintaining testing excellence and meeting organizational quality standards. Quick to adapt and learn new technologies, with a continuous drive for improvement and efficiency in all aspects of quality assurance.

CURRENT COMPANY

2020 - Present

Valueadd Softtech

Responsibilities

- Incorporated Testing processes like Test Plan, Metrics, Report, and Estimation.
- Leading a team and ensuring the configuration and testing of software applications and developing test plans, and test cases
- Writing the automation script as per the requirements and test data provided.
- Design frameworks, Playwright + JavaScript, and Selenium Java from scratch.
- Writing SQL queries to retrieve data for verification
- Resolving scripting-level issues faced by the team
- Sprint management, planning, bug Reporting using JIRA, Azure DevOps
- Client Collaboration: Engage with clients to understand requirements, analysis, and resolution of client queries.
- Product/Application Demo to Client

SKILLS

PROJECTS WORKED ON

1. IWT Atmosphere module and Data Engine

Duration of Project: 6 Months

Technology Used: ReactJS, NestJS, SQL, Python, PySpark

Tools used: Conduktor (for data processing), TestCraft, vscode, Playwright

Team Size: 5-6

Project Description :

The Atmospheric Analytics Platform is a real-time monitoring and reporting solution designed to support the tracking of atmospheric conditions in underground mining operations. Leveraging data from IWT Wireless Gas Monitors via the SENTINEL network, the system provides situational awareness and historical insights on gas, environmental, and ventilation conditions. Atmosphere module monitors gas levels (CO, H2, N2), absolute pressure, and triggers alarms for unsafe conditions, while also providing hourly and daily min/max/average statistics.

Role in the Project :

Took complete ownership of the end-to-end QA process, encompassing requirement analysis, PRD reviews, test planning, and execution to ensure product quality and alignment with business goals.

Authored a comprehensive analysis document that facilitated the team's conceptual understanding and clarified requirements, improving overall collaboration and project efficiency.

Designed and implemented a robust automation framework using Playwright with JavaScript to build a scalable regression suite, enhancing test coverage and reducing manual effort.

Actively collaborated with clients to analyze and resolve queries, ensuring smooth communication and timely issue resolution.

Conducted product and application demonstrations for clients, effectively showcasing features and functionalities to build confidence and gather valuable feedback.

2. HomeWorks (Web and Mobile)

Duration of Project: 6 Months

Technology Used: React, PostgreSQL, NestJS, Flutter

Tools used: JIRA

Team Size: 5-6

Project Description :

HomeWorks is a home services marketplace that connects homeowners with verified service providers. It allows users to manage home details, book services, track maintenance history, and enable market centres and agents to facilitate service bookings while earning commissions. The HomeWorks will operate as a Web and Mobile application

Role in the Project :

Gathering requirements and writing the Acceptance Criteria and Test cases.

Test planning, bug Reporting using JIRA. Product/Application Demo to Client

Mobile Application testing on Android

3. ATC- Agent Transaction Control

Duration of Project: 6 Months

Technology Used: Vue JS

Tools used: JIRA, Selenium+Java, Eclipse, TestCraft, VSCode

Team Size: 5-6

Project Description :

Agent Transaction Control is a web application designed to manage property transactions efficiently. It facilitates transaction registration by agents, enables sellers to submit required forms (VLQ, TDS, SPQ, CSP, etc.), and provides confirmation workflows. Transaction Controllers (TC) can oversee all transactions from their group of agents, ensuring smooth tracking and management. The project also integrates third-party services like DocuSign for digital signatures.

Role in the Project :

Took complete ownership of the end-to-end QA process. Design the detailed test cases.

Designed and implemented a robust automation framework using Selenium with Java to build a scalable regression suite, enhancing test coverage and reducing manual effort.

Actively collaborated with clients to analyze and resolve queries, and provided suggestions that are helpful for improving user experience and quality.

Conducted product and application demonstrations for clients, effectively showcasing features and functionalities to build confidence and gather valuable feedback.

OTHER PROJECTS

- 1.IWT's Analytics Platform and Data Engine deliver an integrated wireless network for underground mining, offering advanced communication and real-time continuous tracking.
- 2.Saltbox (SB) is an enterprise-grade low-code iPaaS enabling application integration, automated data synchronization, and customizable real-time business reporting
- 3.SB Integration provides connectors and workflows to automate data flow across systems
- 4.SB RFQs streamlines the request-for-quote process with real-time tracking for vendors, work orders, and sales orders.
5. Xirify is a mobile application designed to buy and sell within the local community.

WORK HISTORY

Thinkbridge Software, Pune	2 Years Aug 2018 - Sep 2020 Quality Analyst
Varahi Technologies Pvt.Ltd.Pune	1 Years Nov 2017 - Aug 2018 Software Test Engineer
Electronica Mechatronics Systems Pvt.Ltd.,Pune	2 Year Jan 2015 - Mar 2017 Software Engineer

CERTIFICATES

ISTQB Advanced Test Automation Engineer	Feb 2025
ISTQB Foundation Level certification	Nov 2011
Playwright JS/TS Automation Testing From Scratch and Framework	Nov 2025
Gen AI and AI Agents for QA Automation Copilot and Claude code	Mar 2026
