

DevOps Engineer

6.8 Years Experience

ABOUT ME

Experienced DevOps Engineer skilled in cloud infrastructure, CI/CD automation, and scalable system design. Proficient in Azure, AWS, Kubernetes, Docker, Terraform, and Jenkins with a focus on Infrastructure as Code (IaC) and SRE practices. Proven track record in optimizing pipelines, improving reliability, and reducing costs through automation and cloud migrations. Passionate about leveraging AI-driven tools to enhance observability, performance, and decision-making while promoting DevOps best practices across teams.

CURRENT COMPANY

2022 - Present

Valueadd Softtech

Responsibilities

- Build and maintain CI/CD pipelines in Jenkins for automated deployment and testing.
- Manage Docker containers, Kubernetes deployments, and environment configurations.
- Deploy and monitor applications on AWS, Azure, and OCI using IaC with Terraform.
- Configure and maintain Nginx, Prometheus, and Grafana for performance monitoring and observability.
- Implement backup, logging, and SSL management to ensure reliability and security.

SKILLS

- Cloud Infrastructure Management
- CI/CD Pipeline Design & Automation
- Containerization & Orchestration
- Infrastructure as Code (IaC), Scripting & Automation
- Monitoring, Logging & Observability
- Security & Compliance
- Database & Web Server Management
- Troubleshooting & Cost Optimization
- Collaboration & Documentation

TOOLS

- AWS, Azure
- Jenkins, GitHub Actions
- Terraform, Ansible
- Docker, Kubernetes
- Prometheus, Grafana, Loki
- MongoDB, MySQL, PostgreSQL, Nginx
- Bash, Python
- Maven, Gradle, NPM
- Jira, Confluence
- SonarQube, OWASP ZAP, Snyk, Trivy, SSL/TLS
- n8n
- MCP Server
- GitHub Copilot

PROJECTS WORKED ON

1. ImpactCraft

Duration of Project: 1.4 years

Technology Used: Node.js, React.js, Python, MongoDB, Nginx, Shell Script

Tools used: Bitbucket, Jenkins, Docker, Azure (VM, VNet, Blob Storage, Container Registry), Prometheus, Grafana

Team Size: 12

Project Description:

ImpactCraft is a comprehensive solution that empowers Customer Success (CS) teams to streamline CS processes, improve organizational performance, and enhance customer retention through data-driven insights and automation.

Role in the Project:

- Set up and managed Bitbucket repositories for version control and collaboration.
- Designed and implemented Git Flow branching strategies for standardized development workflows.
- Developed Shell scripts to automate manual and repetitive tasks, reducing operational overhead.
- Provisioned Azure infrastructure from scratch, including VMs, VNet, and Blob Storage.
- Configured Jenkins CI/CD pipelines for build, test, and automated deployment.
- Built and optimized Docker images for efficient containerized deployments.
- Implemented Prometheus and Grafana for infrastructure and application monitoring.
- Created real-time dashboards and alerting rules for proactive incident management.

2. EASE Modernization

Duration of Project: 1.1 years

Technology Used: Java, React.js, Maven, Node.js, Oracle DB

Tools used: Jenkins, Docker, Git, SVN, OCI

Team Size: 16

Project Description:

Global EASE™ automates and manages export/import license processes for global trade compliance, document management, and customs filing across multiple regulatory frameworks.

Role in the Project :

- Managed Bitbucket repositories and branching strategies for smoother collaboration.
- Designed CI/CD pipelines in Jenkins, supporting multi-branch and multi-environment builds.
- Automated deployment processes from both Git and SVN repositories.
- Developed Bash scripts for build, packaging, and environment configuration automation.
- Built Docker images for containerized local development and testing environments.
- Optimized Docker image layers for smaller size and faster deployments.
- Deployed applications on OCI container instances for high scalability and resilience.

3. NavigateTrade

Duration of Project: 1 Year

Technology Used: Node.js, React.js, Python, MySQL, MongoDB, Nginx, Shell Script

Tools used: Bitbucket, Jenkins, Docker, Ansible, Pingdom, MySQL, OCI

Team Size: 25

Project Description:

NavigateTrade is a web-based Global Trade Management platform designed to standardize trade compliance operations, automate document workflows, and ensure real-time visibility into trade transactions.

Role in the Project :

- Developed shell scripts for deployment automation and server operations.
- Configured Jenkins pipelines for CI/CD automation across environments.
- Created and optimized Dockerfiles and Docker Compose configurations.
- Built and deployed multi-container applications using Docker.
- Managed Dev, QA, and Prod environments for consistent deployments.
- Implemented release management and documentation practices.
- Monitored infrastructure health and uptime using Pingdom.
- Administered MySQL and MongoDB databases for performance and access control.
- Maintained system and process documentation in Confluence.

OTHER PROJECTS

I developed an on-prem, highly available Accounting Gateway for the HR team, built a - 'Recon Dashboard' to monitor multiple project environments and improve operational visibility, and implemented a new Odoo environment to streamline internal process automation and integrate with existing systems.

WORK HISTORY

Valueadd Softtech & Systems Pvt Ltd

3.6 Years | April 2022 - Present | DevOps Engineer

Winko it solution

3.2 Years | Feb 2019 - April 2022 | Jr. DevOps Engineer

CERTIFICATES

Microsoft Certified: Azure Administrator Associate (AZ-104)

Mar 2025 (Microsoft)
